

**Amendments to the Claims:**

The listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. – 11. (Cancelled)

12. (New) A connection arrangement between two parts connected to one another in a connection zone; comprising, in the connection zone,

a plastic connection including an injection-molded plastic for connecting said two parts; and

an adhesive connection including a cured adhesive also for connecting said two parts.

13. (New) The connection as claimed in claim 12, wherein, the adhesive connection is encased within the plastic connection.

14. (New) The connection as claimed in claim 12, wherein at least one of the parts has, in the connection zone, at least one passage orifice filled with the plastic of the plastic connection.

15. (New) The connection as claimed in claim 12, wherein at least one of the parts consists of metal.

16. (New) The connection as claimed in claim 12, wherein at least one of the parts has a surface coating at least on one side.

17. (New) The connection as claimed in claim 12, wherein that at least one of the parts is a metal sheet.

18. (New) The connection as claimed in claim 12, wherein at least one of the parts is a coil-coated metal sheet.

19. (New) A method for the connection of two parts comprising the steps:

applying a curable adhesive in a connection zone of the two parts;

injection molding the two parts around with a plastic in the connection zone, in order to produce a plastic connection connecting the two parts to one another;

curing the adhesive while the two parts are being connected to one another via the plastic connection, in order to produce an adhesive connection also connecting the two parts to one another.

20. (New) The method as claimed in claim 19,

a curing process of the adhesive is initiated thermally by the injection molding of the plastic.

21. (New) The method as claimed in claim 19, wherein, during the curing of

the adhesive, the two parts are removed from an injection mold into which they were inserted for the injection molding of the plastic at least in a region of the connection zone.

22. (New) The method as claimed in claim 19, wherein the adhesive connection is encased within the plastic connection.

23. (New) The method as claimed in claim 18, wherein at least one of the parts in metal.

24. (New) The method as claimed in claim 18, wherein at least one of the parts has a surface coating at least on one side.

25. (New) The method according to claim 8, wherein at least one of the parts is a metal sheet.

26. (New) The method according to claim 8, wherein at least one of the parts is a coil-coated metal sheet.

27. (New) The connection as claimed in claim 13, wherein at least one of the parts has, in the connection zone, at least one passage orifice filled with the plastic of the plastic connection.

28. (New) The connection as claimed in claim 13, wherein at least one of the parts consists of metal.

29. (New) The connection as claimed in claim 13, wherein at least one of the parts has a surface coating at least on one side.

30. (New) The connection as claimed in claim 13, wherein at least one of the parts is a metal sheet.

31. (New) The connection as claimed in claim 12, wherein at least one of the parts is a coil-coated metal sheet.
